**Flappy Bee Game Documentation**

Welcome to Flappy Bee! This documentation will guide you through the gameplay and provide instructions on how to play the game effectively. Please read the following information carefully to enhance your gaming experience.

Game Objective:

The objective of Flappy Bee is to navigate a bee through a series of pipes without hitting them. Your goal is to achieve the highest score possible by successfully passing through the gaps between the pipes.

Starting the Game:

To start the game, press the spacebar key. After a short delay, the game will begin, and you will control the bee's movement.
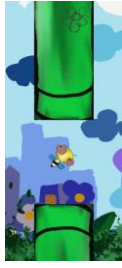

Gameplay Controls:

Press the spacebar: The bee will flap its wings and ascend briefly.

Release the spacebar: The bee will descend automatically.

Scoring:

Each time you successfully pass through a set of pipes without hitting them, you will score one point. The score is displayed on the screen and increases as you navigate through more pipes.

Navigating through Pipes:

Your main challenge is to fly the bee through the gaps between the pipes. Timing is crucial. Press the spacebar at the right moment to ascend and pass through the openings. Be careful not to hit the pipes, as colliding with them will end the game.

Lives and Invincibility:

At the beginning of the game, you have three lives. If you collide with a pipe, you will lose one life. However, you will gain one second of invincibility, during which the bee cannot be harmed. Use this short period wisely to readjust and navigate through difficult sections. Once all three lives are lost, the game will end.

Restarting the Game:

 To restart the game after it ends, press the spacebar. This will initiate a new gameplay session, and you can attempt to achieve a higher score.

Remember, practice makes perfect! Flappy Bee can be challenging, but with patience and determination, you can improve your skills and achieve higher scores.

Enjoy playing Flappy Bee!
